

# Chinese Competitiveness: Where Does The Nation Stand?

Professor Michael E. Porter  
Institute for Strategy and Competitiveness  
Harvard Business School

*EMKT*  
*Beijing, China*  
June 18, 2004

---

This presentation draws on ideas from Professor Porter's articles and books, in particular, [The Competitive Advantage of Nations](#) (The Free Press, 1990), "Building the Microeconomic Foundations of Competitiveness," in [The Global Competitiveness Report 2003-2004](#), (Oxford University Press, 2004), "Clusters and the New Competitive Agenda for Companies and Governments" in [On Competition](#) (Harvard Business School Press, 1998), and ongoing research on clusters and competitiveness. No part of this publication may be reproduced, stored in a retrieval system, or transmitted in any form or by any means - electronic, mechanical, photocopying, recording, or otherwise - without the permission of Michael E. Porter.

Further information on Professor Porter's work and the Institute for Strategy and Competitiveness is available at [www.isc.hbs.edu](http://www.isc.hbs.edu)

---

# Perspectives on Firm Success

- Competitive advantage resides solely **inside** a company or in its industry
- Competitive success depends primarily on **company choices**
- Competitive advantage (or disadvantage) resides partly in the **locations** at which a company's business units are based
- **Cluster participation** is an important contributor to competitiveness

# Comparative Economic Performance

## Real GDP Growth Rates

Annual growth rate  
of real GDP

Countries sorted by 1998-  
2003 annual real GDP  
growth rate (CAGR)

## 1992-2001

World Export Share,  
2001

Source: Institute for Strategy and Competitiveness, based on UNCTAD Trade Data.

# China's Position in International Trade

- China is becoming **increasingly integrated** into the international trading system, with both exports and imports growing strongly
- China's economy is developing significant positions in a **broad portfolio** of important international industries
- China has significantly increased its imports from the **Asian region**
  - The trade balance with Asia is neutral
  - China and the other Asian countries become increasingly integrated
- Large trade surpluses with the U.S. and Europe are **danger signs** if they do not moderate in the future
  - Concerns about market openness, intellectual property, and exchange rate management will ultimately lead to political intervention, and artificial limits on imports will depress China's economic growth

# Comparative Inward Foreign Investment Selected Countries

FDI Stocks as % of GDP,  
Average 1999-2001

# FDI in China

- China has become the world's **largest recipient of FDI** in the world economy\*, with \$52b in 2002

## Drivers of China's Inward FDI flows

- Establishing positions to serve the strongly growing **local market**
  - Examples include recent investments by retail company's like Carrefour and many of the automotive companies
- The desire of companies not to “**miss China**”, given pressures from competitors and the **financial markets**
- Naiveté about the management and operational complexity **costs** of offshoring

- UNCTAD's evaluation of China's **inherent quality** as a location for FDI still ranks the country only at 40
- While there is little systematic data, many investors seem to earn **low or negative returns** on their investments in China

\*Luxembourg registers significantly higher values because financial transaction channeled through the country

Source: UNCTAD (2004)

# China's Economic Situation in 2004

- Strong economic **growth continues** despite the 2003 SARS crisis
  - Policies to avoid overheating of the economy are likely to moderate growth slightly below the current rate
- Chinese **prosperity** continues to rise strongly, but is still only slightly above the level of the poorer Asian countries
  - Significant reduction of poverty over recent years
- **Productivity growth** in the Chinese economy has been strong. Labor is shifting from agriculture and state-owned enterprises into the private economy. However, unemployment has risen.
- China continues to grow its position in the world economy, with an increasing **export share** and **strong FDI**. However, China's international market integration is comparable to other developing countries.

- However, economic success is creating **challenges** to future success as wages and costs of doing business inevitably rise
- China's success has been **artificially inflated** by the size of the home market rather than the true profitability of China as a place to invest
- To remain on its growth path, China needs a strategy to improve the **microeconomic foundations** of its economy to support higher levels of sustainable productivity

# What is Competitiveness?

- Competitiveness is determined by the **productivity** with which a nation uses its human, capital, and natural resources. Productivity sets a nation's or region's standard of living (wages, returns to capital, returns to natural resource endowments)
  - Productivity depends both on the **value** of products and services (e.g. uniqueness, quality) as well as the **efficiency** with which they are produced.
  - It is not **what** industries a nation competes in that matters for prosperity, but **how** firms compete in those industries
  - Productivity in a nation is a reflection of what both domestic and foreign firms **choose to do in that location**. The location of ownership is secondary for national prosperity.
  - The productivity of **“local”** industries is of fundamental importance to competitiveness, not just that of traded industries
  - Devaluation **does not** make a country more competitive

- Nations compete in offering the **most productive environment** for business
- The public and private sectors play **different but interrelated roles** in creating a productive economy

# Determinants of Productivity and Productivity Growth

**Macroeconomic, Political, Legal, and Social  
Context for Development**

## **Microeconomic Foundations of Development**

**Sophistication  
of Company  
Operations and  
Strategy**

**Quality of the  
Microeconomic  
Business  
Environment**

- A sound macroeconomic, political, legal, and social context creates the potential for competitiveness, **but is not sufficient**
- Competitiveness ultimately depends on improving the **microeconomic capability** of the economy and the **sophistication of local companies and local competition**

# Macroeconomic Policy

- China is **not** a traditional case of an overheating economy with high nominal but low real economic growth
  - Price inflation stands at 3.2%
  - Wage inflation is limited by significant unemployment and excess labor in agriculture and state-owned enterprises
    - The total of open and hidden unemployment is reported to be 23%, or 170m employees
- However, **government policies** are somewhat expansionary
  - The government deficit is at 2.5% of GDP, and some regions have been investing more heavily

- There are serious **infrastructure bottlenecks** in the coastal regions, and **real estate** price escalation

# Progress in Human Development Asian Countries

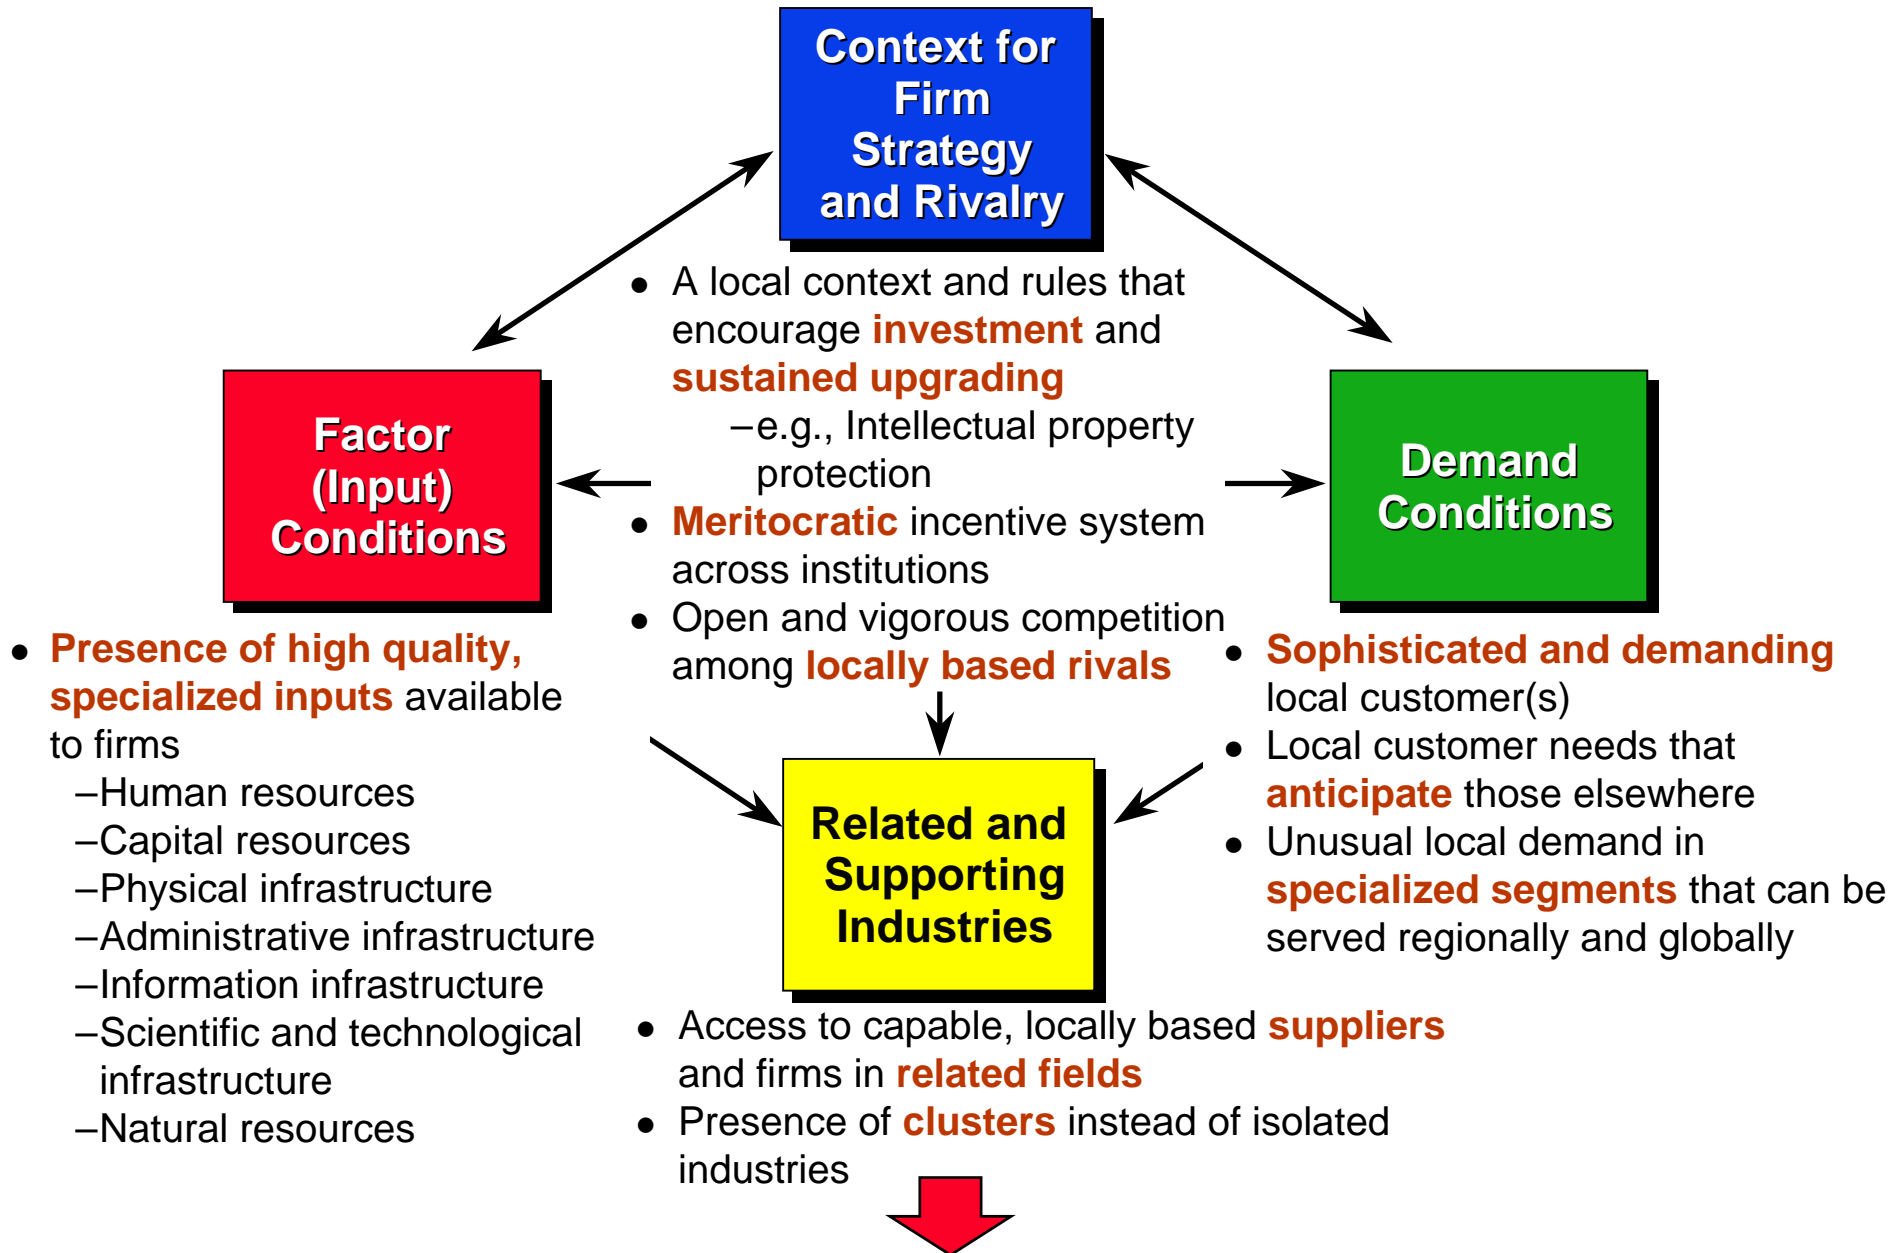

# Legal and Governmental Institutions

## China vs. Low Middle Income Countries

Percentage of  
Leading Country in  
the World, 2002

# Productivity and the Business Environment

- Successful economic development is a process of **successive economic upgrading**, in which the business environment in a nation evolves to support and encourage increasingly sophisticated ways of competing

# The Cairns (Australia) Tourism Cluster

# Clusters and Competitiveness

## Houston Oil and Gas Products and Services Cluster

# Leading Footwear Clusters

## Portugal

- Production
- Focus on short-production runs in the medium price range

## Romania

- Production subsidiaries of Italian companies
- Focus on lower to medium price range

## Italy

- Design, marketing, and production of premium shoes
- Export widely to the world market

## United States

- Design and marketing
- Focus on specific market segments like sport and recreational shoes and boots
- Manufacturing only in selected lines such as hand-sewn casual shoes and boots

## China

- OEM Production
- Focus on low cost segment mainly for the US market

## Vietnam/Indonesia

- OEM Production
- Focus on the low cost segment mainly for the European market

# Institutions for Collaboration

## Selected Massachusetts Organizations, Life Sciences

### Life Sciences Industry Associations

- Massachusetts Biotechnology Council
- Massachusetts Medical Device Industry Council
- Massachusetts Hospital Association

### General Industry Associations

- Associated Industries of Massachusetts
- Greater Boston Chamber of Commerce
- High Tech Council of Massachusetts

### Economic Development Initiatives

- Massachusetts Technology Collaborative
- Mass Biomedical Initiatives
- Mass Development
- Massachusetts Alliance for Economic Development

### University Initiatives

- Harvard Biomedical Community
- MIT Enterprise Forum
- Biotech Club at Harvard Medical School
- Technology Transfer offices

### Informal networks

- Company alumni groups
- Venture capital community
- University alumni groups

### Joint Research Initiatives

- New England Healthcare Institute
- Whitehead Institute For Biomedical Research
- Center for Integration of Medicine and Innovative Technology (CIMIT)

# Global Competitiveness Report 2003

## The Relationship Between Business Competitiveness and GDP Per Capita

Note: Selected Asian countries in blue  
 Source: Global Competitiveness Report 2003  
 GCR China 2003-20040528

# Microeconomic Foundations for Prosperity

## China's Overall Position

- The measured quality of China's business environment would support a significantly **higher** GDP per capita
  - This “underperformance” is typical of many Asian countries and signals strong growth potential
  - For China, the business environment data may also be skewed by the country's richer coastal regions
- However, China still **lags** many of its Asian neighbors in overall business environment quality
- **Key weaknesses** in the Chinese business environment are present in areas such as the context for competition, capital markets, physical infrastructure, and human resources

# Business Competitiveness Rankings

## Asian Countries in 2003

Country	Business Competitiveness Index	Company Operations & Strategy	National Business Environment	GDP per capita
Singapore	8	12	4	21
Japan	13	6	20	17
Taiwan	16	16	16	20
Hong Kong SAR	19	22	15	13
Korea	23	19	25	29
Malaysia	26	26	24	44
Thailand	31	31	32	51
India	37	40	36	76
<b>China</b>	<b>46</b>	<b>42</b>	<b>44</b>	<b>64</b>
Vietnam	50	53	48	80
Sri Lanka	57	52	58	72
Indonesia	60	62	60	75
Philippines	64	48	71	67
Bangladesh	86	86	85	84

# China's Competitiveness Agenda

- **Address key productivity barriers in the Chinese business environment**
- **Adopt a cluster-based approach to economic development**
- **Improve China's potential for innovation**
- **Create economic strategies at the regional and city level**
- **Shift the roles of government, business, and other institutions in economic development**

- **Upgrading the microeconomic foundations of sustainable prosperity in China**

# Company Operations and Strategy

## China's Relative Position 2002

### Competitive Advantages Relative to GDP per Capita

Country Ranking, Arrows  
indicate a change of 5 or more  
ranks since 1998

Capacity for Innovation	25	
Control of International Distribution	25	↑
Company Spending on R&D	28	
Extent of Branding	30	
Breadth of International Markets	33	↓

### Competitive Disadvantages Relative to GDP per Capita

Country Ranking, Arrows  
indicate a change of 5 or more  
ranks since 1998

Extent of Marketing	73	
Prevalence of Foreign Technology Licensing	67	↓
Nature of Competitive Advantage	56	↑
Extent of Staff Training	54	↑
Value Chain Presence	54	
Degree of Customer Orientation	50	↓
Reliance on Professional Management	50	↓
Extent of Regional Sales	49	↓
Extent of Incentive Compensation	48	
Production Process Sophistication	46	↑
Willingness to Delegate Authority	43	

Note: Rank by countries; overall China ranks 46 (42 on Company Operations and Strategy, 64 on GDP pc 2002)

# WTO Accession and China's Business Environment

- Reduction of average **tariff rates** to 10% by 2005
- Removal of all **quantitative trade restrictions**
- Transparent and automatic licensing of foreign companies in many **service** sectors, including banking, telecommunications, etc.
- Non-discrimination rules for **foreign investors**, including end to mandatory technology transfer requirements
- Enforcement of foreign **intellectual property rights**
- Elimination of **export subsidies** not allowed by WTO- rules
- Participation in the **WTO arbitration** mechanisms
- **MFN access** to all other WTO member markets

- First annual review of compliance in December 2003 showed China to be **on track** to deliver on its commitments

# China's Competitiveness Agenda

- Address key productivity barriers in the Chinese business environment

- **Adopt a cluster-based approach to economic development**

- Improve China's potential for innovation
- Create economic strategies at the regional and city level
- Shift the roles of government, business, and other institutions in economic development

# The Role of Clusters in Economic Development

## Overview

- Clusters are **critical drivers of prosperity and innovation** in national and regional economies
  - The health of the cluster strongly influences the level of productivity that companies can achieve
  - Regional prosperity depends on significant positions across a number of competitive clusters
- A focus on clusters reveals the **opportunities** and **constraints** in the business environment
  - Overall economic development efforts gravitate to cross-cutting areas such as taxes and trade protection that affect all companies
- Clusters provide a **new way of thinking** about an economy and organizing economic development efforts
  - More aligned with the nature of competition and microeconomic factors that influence competitive advantage
  - Bring together firms of all sizes to identify common opportunities, not just common problems
  - Recast the roles of the private sector, government, trade associations and educational and research institutions in economic development

# Related and Supporting Industries

## China's Relative Position

### Competitive Advantages Relative to GDP per Capita

Country Ranking, Arrows  
indicate a change of 5 or more

# The Yangtze River Telecommunications Cluster

- The Yangtze River Delta has become home to a wide array of manufacturers in telecommunication equipment
  - The cluster has been the focus of economic policy since the mid-1980s
- The cluster has benefited from access to low cost, well educated labor, the presence of related electronics manufacturing clusters, strong infrastructure, and a quickly growing market
- The cluster is increasingly moving to serve domestic demand and more domestically-owned companies are emerging
- The challenge for the cluster is to move from being a production site to becoming a more advanced center for production and products
  - For example, local universities are poorly linked to companies in the cluster

# The Costa Rica Information Technology Cluster

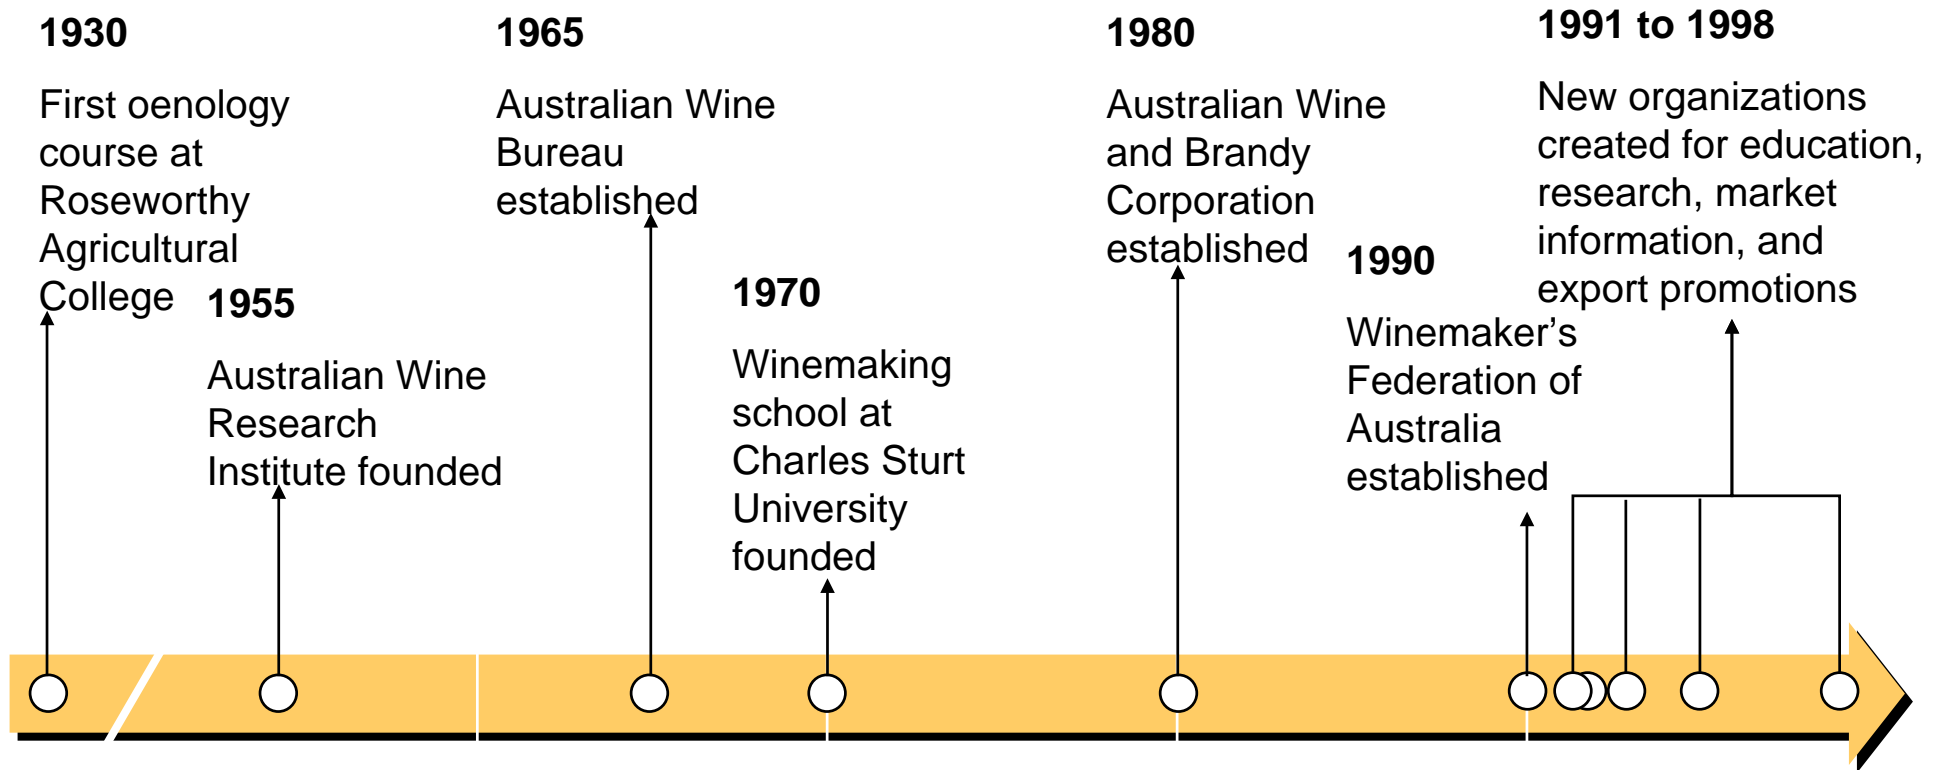

# The Australian Wine Cluster

## Trade Performance

Source: UN Trade Statistics

# The Australian Wine Cluster History

## 1950s

*Import of European winery technology*

## 1960s

*Recruiting of experienced foreign investors, e.g. Wolf Bass*

## 1970s

*Continued inflow of foreign capital and management*

## 1980s

*Creation of large number of new wineries*

## 1990s

*Surge in exports and international acquisitions*

# Cluster Policy versus Industrial Policy

- Target desirable industries / sectors
- Focus on domestic companies
- Intervene in competition (e.g., protection, industry promotion, subsidies)
- Centralize decisions at the national level

**Distort competition**

- **All** clusters can contribute to prosperity
- Domestic and foreign companies both enhance productivity
- Relax impediments and constraints to productivity
- Emphasize cross-firm and cross-industry linkages / complementarities
- Encourage initiative at the state and local level

**Enhance competition**

# China's Competitiveness Agenda

- Address key productivity barriers in the Chinese business environment
- Adopt a cluster-based approach to economic development
- **Improve China's potential for innovation**
- Create economic strategies at the regional and city level
- Shift the roles of government, business, and other institutions in economic development

# China's Competitiveness Agenda

- Address key productivity barriers in the Chinese business environment
- Adopt a cluster-based approach to economic development
- Improve China's potential for innovation
- **Create economic strategies at the regional and city level**
- Shift the roles of government, business, and other institutions in economic development

# China's Competitiveness Agenda

- Address key productivity barriers in the Chinese business environment
  - Adopt a cluster-based approach to economic development
  - Improve China's potential for innovation
  - Create economic strategies at the regional and city level
- **Shift the roles of government, business, and other institutions in economic development**

# Shifting Responsibilities for Economic Development

## Old Model

- **Government** drives economic development through policy decisions and incentives

## New Model

- Economic development is a **collaborative process** involving government at multiple levels, companies, teaching and research institutions, and institutions for collaboration

# Roles of Government in Economic Development

- **Improve the macroeconomic, political, legal, and social context**
  - Establish a **stable and predictable** macroeconomic, legal, and political environment
  - Improve the **social conditions** of citizens
- **Upgrade the general business environment**
  - Improve the availability, quality, and efficiency of **cross-cutting or general purpose inputs, infrastructure, and institutions**
  - Set **overall rules and incentives** governing competition that encourage productivity growth
- **Facilitate cluster formation and upgrading**
  - Identify **existing and emerging clusters**
  - Convene and participate in the identification of **cluster constraints** and **action plans** to address them
- **Lead a collaborative process of economic change**
  - Create institutions and **processes for upgrading competitiveness** that inform citizens and mobilize the private sector, government at all levels, educational and other institutions, and civil society to take action

# Role of the Private Sector in Economic Development

- Take an **active role** in upgrading the local infrastructure
- Nurture **local suppliers** and attract new supplier investments
- Work closely with local **educational and research institutions** to upgrade **quality and create specialized programs addressing cluster needs**
- Provide government with **information** and **substantive input** on regulatory issues and constraints bearing on cluster development
- Focus **corporate philanthropy** on enhancing the local business environment

- An important role for **trade associations**
  - Greater influence
  - Cost sharing

# China's Competitiveness Agenda

- **Address key productivity barriers in the Chinese business environment**
- **Adopt a cluster-based approach to economic development**
- **Improve China's potential for innovation**
- **Create economic strategies at the regional and city level**
- **Shift the roles of government, business, and other institutions in economic development**

- **Upgrading the microeconomic foundations of sustainable prosperity in China**

# Backup

# Total Factor Productivity Performance

- In the post-1978 reform period China registered solid TFP growth
- More recent estimates indicate TFP growth rates between 2% - 4% for the late 1990s
- This performance is no surprise given the massive shift from agriculture to industry
- Agriculture (and transportation/telecommunication) had the strongest sectoral TFP growth according to one study

# China's Economy in Perspective

- While China has been growing strongly over the last two decades, it still has a long **way to go**

- Despite its impressive growth and its huge population, China's **total GDP** is at roughly 25% of the U.S. or EU level and at less than 50% of the Japanese level
- Despite its impressive growth in exports, China's share of the **world export market** is below that of countries like the UK and France
- While China has become the largest recipient of inward FDI\*, it's **FDI level** is at roughly 35% of GDP which is similar to the region and to the average of developing economies overall

- Chinese prosperity measured by GDP per capita remains relatively low, despite some improvement of key social indicators

\*Luxembourg registers significantly higher values because financial transaction channeled through the country

Source: UNCTAD (2004), EIU (2004), WTO (2004)

# Weakness in the Chinese Business Environment

## Financial markets

- Private sector companies have relied heavily on internal financing or foreign investors
- Banks (state-owned) have traditionally propped up inefficient government-owned companies, although reforms are occurring
  - Share of non-performing loans estimated to be 25% - 50%

## Competition

- The intensity of rivalry in China is high, though many rules and regulations still tilt the playing field among companies
  - State-owned companies are supported to avoid social hardship and foreign companies are forced to make concessions
  - These goals can over time be only achieved in fair competition in an adequate policy environment
- The full implementation of China's WTO commitments is critical to remove these imbalances

# The Chinese Fireworks Cluster

- China is the **world's largest producer and exporter** of fireworks. The cluster employs 600,000 people and is worth \$1.2bn per year. The cluster earns \$400 million per year in exports and accounts for 90% of the world trade in fireworks. Four regions produce the majority of fireworks in China. Several have a history of making fireworks going back over a thousand years.
- Historically safety has been poor characterized by **frequent explosions causing many deaths**. The industry relies heavily on child labor.
- Liuyang City in Hunan Province imposed **stricter safety standards**, raising the cost of opening a factory by 50%. The city invested \$60 million in technical upgrades and closed 10,000 small workshops that didn't meet the new standards. However, production thrived and the area now **accounts for 60% of exports**.
- Jiangxi province, China's second largest producer, declared all fireworks production would cease in 2004 following a deadly blast in 2002.
- In January 2004, the State Council adopted industrial **safety regulations** requiring three-year renewable licenses for mines, construction, chemical, fireworks, and explosives firms.
